Boy III	TEXT OF THE	ABSTDACT	(Continuation of Item	a 5 of the first sheet)
BOX III	IEXI OF THE	ABSTRACT	(Continuation of Iter	n 5 of the first sneet)

The technical features mentioned in the abstract do not include a reference sign between parentheses (PCT Rule 8.1(d)).

NEW ABSTRACT

An apparatus (21) for ascertaining cardiac output of the heart of a patient comprises a control and display module (22). A venous probe is inserted into a vein in the forearm of the patient and is coupled into the control and display module (22). The venous probe provides an electrical signal representing the dissolved oxygen in the venous blood. An arterial probe (23 and 24) is inserted into an artery in the forearm (26) of the patient and is coupled to the display and control module (22). The arterial probe provides an electrical signal representing the dissolved oxygen in the arterial blood. The control and display module (22) has a visible display (102) that provides a continuous in vivo cardiac output that utilizes an arterial venous oxygen differential equation, which includes an adjustment factor for adjusting for venous blood being sampled rather than mixed venous blood in the pulmonary artery of the patient.
